PROFESSIONAL SUMMARY

Business Informatics student (UCR, expected 2027) and freelance software developer who builds production-grade business systems, not classroom exercises. Delivered an offline-first ERP for a diesel and gasoline fuel-injector laboratory (372 automated tests, native Windows desktop app) and a POS/e-commerce platform for a jewelry retailer. Both sold as paid freelance work and live in production today. Full-stack across Python/Django, Node.js, React/Next.js, PostgreSQL/MySQL/SQL Server, Docker, AWS and Azure.

EDUCATION

Universidad de Costa Rica (UCR)

Bachelor's degree in business informatics (2024 – 2027, Expected)

TECHNICAL SKILLS

Programming: Java, Python, JavaScript, TypeScript, C#

Backend: Spring Boot, Django, Node.js, Express

Frontend: React, Next.js

Databases: SQL Server, PostgreSQL, MySQL

Cloud & Infrastructure: AWS, Azure, Docker, Linux, Nginx

PROFESSIONAL EXPERIENCE

Independent Software Developer | Nov 2025 – Present

LICS — Offline ERP for Laboratorio de Inyección Castro Solís | Jul 2026 – Present (Paid client project)

- Designed and built an offline-first ERP covering inventory, purchasing, import costing, sales, customers, injector service tracking, physical counts and reporting for a real diesel and gasoline fuel-injector laboratory.
- Architected a Dockerized stack (Django REST Framework, PostgreSQL 17, Next.js, Nginx) packaged as a native Windows desktop app (Electron + WSL2 + Docker Engine) for fully offline operation.
- Built automated backups (systemd-timer, SHA-256 verified) with validated disaster recovery, 372 automated tests and full production-readiness documentation.

Jewelry Management & POS Platform — Cuero&Perla | Nov 2025 – Present (Paid client project)

- Built and maintain a production monorepo (POS, admin backend, public storefront) for a working jewelry retailer, live for 9+ months.
- Implemented point-of-sale, inventory with variants and composite products, accounts receivable, daily cash closing and returns.
- Built a public Next.js storefront with online ordering and checkout, thermal receipt printing (ESC/POS over WebUSB), Cloudinary and Web Push; deployed on AWS (serverless) and Vercel.

EsteticaPro — Appointment Management SaaS | Jun 2026

- Built an API-first (Django REST Framework + JWT) scheduling platform for beauty salons with conflict-free booking and role-based access for admins, receptionists and estheticians.
- Implemented async reminder workflows (Celery, Redis, WhatsApp integration); designed for future multi-tenant commercialization.

ACADEMIC & TEAM PROJECTS — UNIVERSIDAD DE COSTA RICA

NexoAcadémico (solo, 2026): Full-stack academic management platform (Next.js, Django, MySQL) — enrollment, tasks, submissions and grading with role-based workflows.

SIGAU (team of 3, 2026): Azure SQL Server security project — CIS hardening, Row-Level Security, Dynamic Data Masking, deployed on an Azure VM.

IF5000 Network & Security Infrastructure (team of 4, 2026): Hardened Linux server — Docker, Tailscale VPN, Suricata IDS, Prometheus/Grafana.

TCP/IP Remote Administration (team, 2025): Python client-server tool using raw TCP sockets, multithreading and a custom GUI.

LANGUAGES

Spanish (Native) | English (B2)
